NAVEEN KESHAVA

Technical Lead | 10.5+ Years

+91 9900253603 keshnaveen@gmail.com https://www.linkedin.com/in/keshnaveen/

SUMMARY

Technical Lead with 10.5+ years building and running Node.js/Nest.js platforms on AWS. Owns production reliability end to end: observability, alerting, incident RCA and CI/CD guardrails. Most recently leading production engineering for ChargeZone's EV charging platform (1,000+ chargers).
Previously Technical Owner of Yara's retailer loyalty platform, leading a team of 10+.

EXPERIENCE

Technical Lead

Tequity

08/2025 - Present Bangalore, India

A service-based startup. Delegated to ChargeZone (EV charging platform) as Technical Lead for production engineering.

Senior Engineer

Altimetrik

03/2025 - 07/2025 Bangalore, India

A service-driven company. Delegated to **Intuit**.
Supported Intuit product teams on production deployments and releases.

Senior Software Developer (Tech Lead)

Yara International

02/2021 - 02/2025 Bangalore, India

A global leader in crop nutrition and crop protection.

Technical Lead

Mobinius Technologies

07/2018 - 02/2021 Bangalore, India

A software development company specializing in mobile and web applications.

Software Associate

Inflexion Technology Solutions Pvt. Ltd

03/2015 - 03/2018 Bangalore, India

A provider of technology solutions in various sectors.

SKILLS

Backend Development

Node.js Nest.js Express.js TypeScript JavaScript .NET Core C# MongoDB PostgreSQL MySQL Redis

Frontend Development

React.js HTML CSS

Other Skills

AWS Kubernetes Docker GitHub Actions (CI/CD) AWS Lambda OAuth2.0 Kafka RabbitMQ Temporal.io New Relic Microservices Architecture LLD and HLD RESTful Services API Gateway

EDUCATION

B.E. in Computer Science and Engineering

VTU

03/2010 - 04/2014 Bangalore

HONORS AND AWARDS

Best Employee Of the Month

Issued by Inflexion Technology Solutions on Jun 2016

PROJECTS

ChargeZone - EV Charging Platform

08/2025 - Present

Tequity | Node.js Nest.js Hono MongoDB Atlas AWS (ECS, Lambda, MSK/Kafka, ALB, WAF, Cognito) New Relic RabbitMQ
Production platform behind 1,000+ public EV chargers (OCPP), the ChargeZone mobile app and CMS.

- Technical Lead for production reliability across OCPP, mobile, CMS and OCPI services, driving a 99.99% availability goal through observability (MTTD/MTTR) and DORA metrics.
- Built an Engineering Ownership Metrics dashboard and alerting pipeline (New Relic, CloudWatch → Teams/ZenDuty) with P0-only paging, AI-generated diagnoses and Jira ownership across every production service.
- Authored LLDs for RabbitMQ delayed-message booking auto-cancellation, a real-time charger status feed over WebSockets, wallet transaction idempotency, and a new OCPI service (Nest.js + Kafka).
- Audited the production architecture (WAF, ALB, EC2/ECS, MSK, Atlas) and produced a system risk review, bottleneck analysis and CI/CD enforcement plan for engineering leadership.
- Root-caused a cloud-cost spike to a Node.js timer overflow (202K unintended API calls), then hardened the service: external cron with run-once guarantees, signed ALB/Cognito token verification, and test-gated manual production deploys.

Yara Connect

02/2021 - 02/2025

Yara International | Node.js Nest.js TypeScript SQL MongoDB AWS Temporal.io
Customer loyalty platform to strengthen retailer engagement.

- Technical Owner for the platform: designed LLDs, led a team of 10+ engineers and QA, and owned production deployments.
- Launched a new online shop and rewards-points engine, improving retailer retention.
- Reduced latency on existing APIs and built new APIs for order placement and product recommendations.
- Built an auto-expiry engine for loyalty points driven by business-defined dates.
- Introduced Temporal.io for durable workflow execution, improving the reliability of long-running processes.

Frontier Markets

01/2019 - 01/2021

Mobinius Technologies | Node.js Express TypeScript MongoDB C#
An inventory management system for enhanced product operations.

- Designed the data model with business owners and took part in architecture decisions for the platform.
- Built the customer-app APIs (Meri Saheli): onboarding, profiles, order placement, payments, processing and cancellation.
- Integrated RazorPay and CCAvenue for payments and refunds on cancellation.
- Streamed MongoDB data to AWS Redshift via Kinesis for Power BI reporting, giving the business regional demand and revenue insights.

RouteJoot

03/2015 - 03/2018

Inflexion Technology Solutions | .NET Core C# Node.js Express Google Maps React.js
A rider application connecting individuals and managing their rides.

- Led development of core features: Groups, Events, Live Tracking and SOS, improving rider safety and coordination.
- Built real-time rider tracking with MongoDB 2D geospatial indexing.
- Developed the Node.js/MongoDB backend, including APIs for user onboarding and ride initiation.
- Used RabbitMQ as an MQTT broker to stream location updates efficiently.
